

Liberta Prima

The EASIER and CHEAPER software for designing your wooden roof!

The easiness of a parametric in a professional and economical software!

Create your own timber roofs in a few minutes and without effort. Thanks to the integrated Roof Wizard (Assistant), all you have to do is select the plan type, the shape, enter the sizes, choose and set the profile by defining slopes, overhangs, pitch heights and the timber frame to be created (rafters, collar beams, purlins, etc...). With just one click, Liberta Prima creates the complete roof with the whole framework. You can also insert dormer, skylights and chimneys with the appropriate tools and Liberta Prima will take care of adapting the framework to accommodate them. 3D and changes are instantaneous.

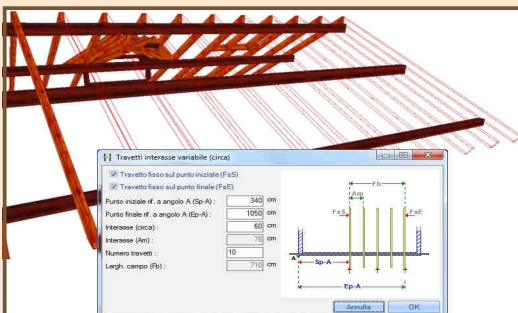

Parametric Software!

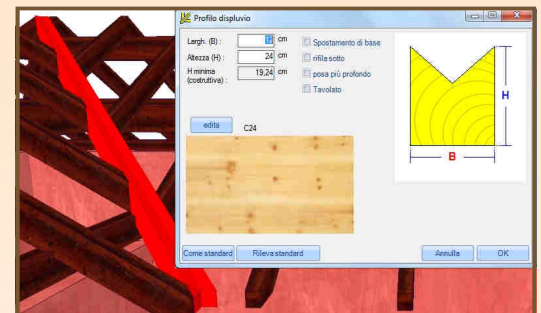

CLEAR AND EFFECTIVE 3D REPRESENTATIONS TO WIN NEW CUSTOMERS !

Show the whole project to your customers and add other details such as doors and windows. Thanks to the tool for automatic adaptation of walls under the roof you can freely modify the walls.

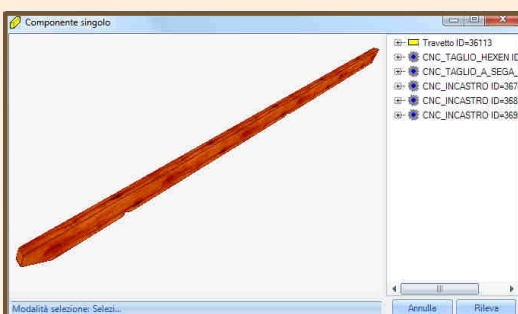

Special functions for planners and carpenters

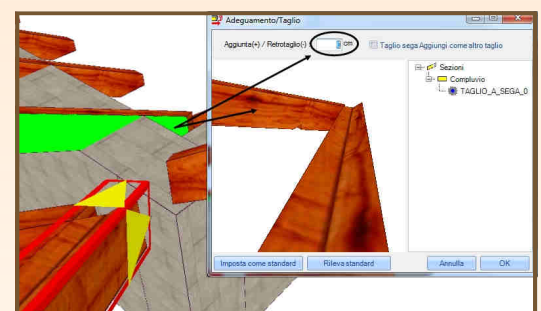

Free rafters arrangement

Ridge and Valley rafters creation

3D Machining Inspector

Controlled cutting of components on existing references

Liberta Prima
